
THE UNIVERSITY *of* EDINBURGH

# Text Technologies for Data Science

## INFR11145

# Coursework #1

Instructor:
**Walid Magdy**

05-Oct-2022

# Required

- Implement a simple IR tool, that includes
  - Preprocessing of text
    - Tokenisation
    - Stopping
    - Stemming
  - Positional inverted index
  - Search execution module that allows:
    - Boolean search
    - Phrase search
    - Proximity search
    - Ranked IR (TFIDF)

# Challenge question

- What will happen to results when stopping is not applied?
- Test it
- Report your observations for both:
  - Boolean search
  - Ranked IR

- Challenge question worth only 20% of CW1 mark
- Not expected to be done by most students

# CW1 depends on

- Lectures:
  - Lecture 4: Preprocessing
  - Lecture 5: Indexing
  - Lecture 7: Ranked IR
- Labs:
  - Lab 1: Preprocessing
  - Lab 2: Indexing and Query execution
  - Lab 3: Ranked IR
- Note: By implementing Lab 3, you should have CW1 almost ready

# Deliverables

- Code ready to run:
  - Required: Python
- Report (2-4 pages):
  - Includes: modules implemented and role of each
  - Why you selected to do each step in this way?
  - The challenge question
- Search Results files:
  - Files containing the search results of provided queries

# Assessment

- To be considered:
  - Search results (automatic marking)
  - Quality of report and explanation for code

- Not highly considered:
  - Speed of the system (unless unreasonably slow!)
  - Quality of code
    - Note: readable code allows markers to provide better feedback.

# Allowed/not allowed

- Allowed:
  - Use libraries for Porter stemming
  - Use ready code for optimisation
  - Discuss some functions with your friends
  - Use Piazza to ask general questions on implementation

- Not Allowed:
  - Using libraries for tokenisation or stopping!
  - Copying code from each other!
  - Share results by any mean!

# Timeline

- 5 Oct 2022
  *Initial announcement of CW1*
  *Full details of CW1 to be released*
- **27 Oct** 2022
  *Test Set Release*: *the test data collection to run your code on and submit the results*
- Sunday, **30 Oct 2022, 11:59:59pm**
  *Submission deadline*

# Notes

- CW1 weight = 10% (only)
- Effort is high, but ..
- Full support through labs 1, 2, and 3
- Less details = more flexibility
- Good practice to build a system from scratch
- Once done: you built a search engine
- Next CW: will be not covered by labs (hence higher weight)

# Advices

- Lab 1 + Lab 2 + Lab 3 = CW 1
- Implement carefully
- Write efficient & clean code
- Change preprocessing & observe change!
- Test & test & test
- Keep your system as a project to add on as we go in the course
